HOW TO MIGRATE TO S/4HANA

BROCHURE

HOW TO MIGRATE TO S/4HANA

The *Convert to S4 by everis* service is the answer.

Once the client has opted for Technical Migration (known as Brownfield) to move to S/4HANA, **everis proposes a specific service for this migration**. Here, the use of accelerators and tools (everis', SAP's, and third parties') is combined with the appropriate methodology, a team (part local and part remote) specialised in such migrations, and the vast experience of an S4 Expert Centre. Together, this ensures cost reduction, increased efficiency and minimised risk in order to reduce impact on the organisation and instead capitalise on the benefits of adopting the new ERP.

**S/4HANA
MIGRATION TEAMS**

We have experts specialised in implementing S/4HANA migration projects, made up of both local teams and remote help centres that reduce costs and minimise risk.

**TOOLS FROM
EVERIS, SAP,
& OTHER
PARTNERS**

Using the right tools is key to properly performing both an initial analysis and execution. everis has its own tools for this purpose, and also uses SAP's. If necessary, everis will also work with partner companies to use their tools. (Panaya).

**SPECIALISED
KNOWLEDGE**

Our S4 Expert Centre, launched five years ago, amasses and generates specialised knowledge about S/4HANA. In addition, S/4HANA's production model for projects allows the system to learn from itself through a process of feedback as well as ongoing training and research.

**CUSTOMISED
PRICE**

Thanks to our tools and experience, we can adapt projects to the needs of each client, depending on their circumstances, using different package 'sizes'. The price is set up front.

**EVERIS S4
MIGRATION
PACKAGE**

OBTAIN THE BEST STRATEGY AND ROADMAP FOR YOUR ORGANISATION

Benefits of the service:

- It makes the carrying out of projects more efficient by reducing execution times, as our production model is based on migration centres and the utilities/accelerators that allow us to reach and surpass milestones with more guarantees and less effort.
- In parallel with the execution of the project, everis offers, at no additional cost, a service pack of five working days to identify improvements in one of the following areas:
 - The area of Analytics, to help your organisation discover the capabilities of SAP S/4HANA for transactional reporting in real time, as well as to advise on the evolution of the different SAP tools of this nature that are available to the client (BW, BO, BPC...).
 - The area of Fiori (analysis of the most relevant apps by process).

Why everis?

- Custom everis tools that speed up the migration to SAP S/4HANA.
- Production model made up of local team + remote help centres
- In the case of contracting the assessment service, added value in different areas of the company (business, IT) as a result of the pre-migration assessment.
- Knowledge of S4: Our SAP Business Unit is entirely dedicated to SAP S/4HANA and the management, development, governance and control of S/4HANA projects and knowledge. This unit accompanies customers before, during, and after S4 adoption, with a realistic and highly practical understanding of innovation.
- A strong, ongoing alliance with SAP.
- Market recognition.

How to migrate to S/4HANA

an NTT DATA Company

Depending on the unique needs and situation of each company, different package 'sizes' will be established to accommodate each client. These sizes are estimates, and do not include possible projects to carry out before migration. A definitive proposal will be created for each client, depending on the final roadmap estimated for the project.

Variable	Size S	Size M	Size L
Companies	Up to 3 companies	Up to 5 companies	Up to 15 companies
Location	> 2 countries (EMEA)	> 3 countries (EMEA)	> 6 countries (EMEA)
Users	100	500	1500
SAP modules	FI/CO/PS, MM, SD	FI/CO/PS, MM, SD, PP, WM, QM, PM, HCM	FI/CO/PS, MM, SD, PP, WM, QM, PM, HCM
# of environments to be converted	2	3	4
Interfaces	< 8	< 15	< 25
Add-ons	1	3	5
Iterations in the migration cycle	2	3	3
Custom-developed objects	500	1500	3000
Database size	0.5 TB	2 TB	4 TB
Activation of Fiori apps	Only mandatory apps	< 25	< 45
Acceptance testing support	30 days	50 days	80 days
Implementation support	20 days	30 days	40 days
Estimated duration (*)	24 weeks	From 28 weeks	From 32 weeks

(*) The duration of the project is subject to change. The final project plan will be adjusted after we've analysed the results of the execution of the different SAP and everis tools, and studied the variables specific to each customer.
